SUMMARY

Recent graduate (AAS, Web Development with AI) with hands-on backend and full-stack experience across Python, FastAPI, React, and Next.js. Completed a five-project self-directed internship track covering REST APIs, multi-tenant systems, background job processing, and AI workflow orchestration — including a production-style platform handling untrusted, cross-origin traffic with rate limiting and spam defenses. Comfortable using AI coding tools daily and picking up new frameworks quickly.

EXPERIENCE

Backend AI Engineering Intern

Jul 2026 – Aug 2026

Fly Rank AI — Remote

- Designed and built five progressively advanced backend/AI systems through a self-directed internship track, including a multi-tenant lead-capture platform with Supabase auth and SQL-level tenant isolation, a Redis-backed background job queue with retries and idempotency, and a durable AI workflow engine
- Practiced REST API design, authentication, and background job processing across all five projects

Web Development & AI Media Intern

May 2026 – Jun 2026

Agilis USA — Remote

- Built UI components in React and contributed to backend functionality for a social media automation platform

Marketing Management Intern

Jun 2026 – Jul 2026

J Legacy Holding Co. — Remote

- Supported email marketing and SEO activities across platforms

PROJECTS

Embeddable Widget & Lead-Capture Platform — Python, FastAPI, PostgreSQL, Docker, Supabase Auth

- Built a multi-tenant platform accepting public form submissions from untrusted, cross-origin websites — with rate limiting, honeypot spam filtering, two-provider geo-IP fallback, and SQL-level tenant isolation so a mismatched owner query returns 404, never leaking resource ownership

AI Decision Flow — Visual AI Workflow Builder — Next.js, React Flow, Inngest, TypeScript

- Built a visual workflow tool where each node is an AI decision step; execution runs as durable, retryable Inngest functions based on LLM outputs

Background Job Queue for Slow AI Calls — FastAPI, Redis, RQ, Python

- Built a 3-process async job system with idempotency keys, exponential-backoff retries, and failure alerting; debugged real Windows-specific multiprocessing issues

Task Manager API — In-Memory to Containerized Persistence — Python, FastAPI, PostgreSQL, Docker

- Built a CRUD REST API and evolved its storage layer across three versions using a repository-pattern architecture

Polite Web Scraper — Books to Scrape — Python

- Built an ethically-designed scraper (honest User-Agent, rate limiting, graceful pagination handling) collecting and structuring 1,000 records into clean JSON

TECHNICAL SKILLS

Languages: Python, JavaScript/TypeScript, PHP, Java, SQL

Frontend: React, Next.js, React Flow, HTML5, CSS3

Backend & Systems: FastAPI, REST API design, Redis, RQ, background job processing, idempotency, multi-tenant architecture

Databases & Infra: PostgreSQL, SQLite, Redis, Docker, Docker Compose

Security & Auth: Supabase Auth, JWT verification, rate limiting, spam defenses, tenant isolation

AI Tools & Orchestration: Inngest, OpenAI API, Claude, Claude Code (learning), GitHub Copilot, prompt engineering

Tools: Git, GitHub, VS Code

EDUCATION

Associate of Applied Science — Web Development with AI
